

# 'FOLDAWAY' BIKE TOWING TRAILER

**FROM THIS.....**

**TO THIS .....**

**IN UNDER 3 MINUTES !**

Specification :

Towing Weight : 350Kg

The 'foldaway' motor bike trailer is a quality engineered, robust and yet easy to assemble piece of equipment.

The foldaway trailer is similar to a normal motorcycle trailer: the essential difference being the provision of a hinged towing eye arm, thus permitting the trailer to 'break its back' for loading and unloading. Further, the towing arm can be folded back under the main spar for storage.

A more conventional difference is that the main spar is jointed behind the axle tube, allowing the rear half body to be detached from the front half body and stored separately.

Similarly, the wheel assemblies are readily removable from the axle tube while the axle tube itself is detachable from the front half body.

Used by a major motor vehicle recovery organisation, it can be carried in the boot of most cars and can be assembled in less than three minutes.

Assembly requires no spanners or other tools, comprising of only five main components.

It is supplied with loading ramp and ratchet strap tie downs.

Price - £465.00 + VAT (Inc red powder coating.)

**SIMPLE, STURDY,  
PROVEN.**

OPTIONAL EXTRA's :-

Lighting Board - £15.00 + VAT
