

COMPACT CAR TOWING TRAILER

FROM THIS.....

TO THIS

IN UNDER 4 MINUTES !

Specification :

Towing Weight : 1000Kg

Discover a whole new world of Modern Vehicle Recovery with this remarkable, 'user friendly', stow on board towing implement.

The 'STOWBOY' takes just Four minutes to assemble and be ready for loading. No spanners or other tools are needed, comprising 5 main components which key together. The heaviest component weighs only 22Kg.

The track can be adjusted to suit the car being towed and has the lowest loaded vehicle height of any towing dolly, thus allowing the road to be seen through your rear view mirror and reducing the possibility of 'grounding' of vehicles with long overhang, loaded boot or tow bracket.

The 'STOWBOY' has unique self steering wheels (patent applied for). There are no drawbar pivot pins or track rods to wear. The wheels turn to a degree proportionally to the turn on special thrust washers and then automatically self centre, even on wet or rough roads.

The towing attachment can easily be carried in the back of a van, vehicle pickup truck or even in the boot of a large saloon car.

THIS TRAILER SHOULD BE CARRIED ON BOARD AND NOT TOWED UNLADEN.

ONLY TO BE USED FOR TOWING BROKEN DOWN VEHICLES.

**SIMPLE,
STURDY,
PROVEN.**
